

## Behavior Survey Form for patients with novel coronavirus infection (search for contacts)

NESID registration ID:

Patient Name:

☆ Post-onset behavioral surveys are conducted to identify close contacts and prevent the spread of the infection. In principle, describe the behavior of the patient until just before diagnosed and treated as a case. Also, describe people who were in the same rooms as the patient or had a conversation with them, prioritizing those who can be reached.

Days before or after the onset	Date	Time	Contact status with people other than those living with the patient	Contact place	Contact names*	Contact information of the contact persons	Notes
